

Software Configuration Management (SCM) Engineer to be responsible for the administration, planning, deployment and support of tools used to support our software product development efforts. This team-based position will be primarily responsible for performing and verifying builds of Delphi and .Net as well as Visual Source Safe administration

2. Primary Responsibilities (Be as specific as possible: what they will do):

- Visual Source Safe/Team System Build administration in support of product development activities
- Assembling packaged media for installation, conducting test installs of packaged media, and deploying media to various testing environments
- Planning, coordination, execution and validation of builds for multiple products including hotfix, patch and support activities
- Assisting in the design of development environment, build framework and packaging/install processes to support requirements.
- Documentation of configuration, installation and build information in conjunction with our documentation team for various guides and release notes
- Assisting in production support issues, as requested.
- Support of Development Integration, QA and Production environments.
- Assisting developers and testers **troubleshooting build and environment problems.**
- Support software configuration audit and review activities, as requested.
- Support software engineering process review and improvement activities, as requested.
- Ability to work off hours as and when required.
- **Develop and maintain Build Scripts**
- Managing Disaster Recovery and Build Reproduction Procedures

3. Qualifications: (Be as specific as possible: what specific skills, years of experience, and education level they must have for you to interview them)

* Experience with **source control tools** (e.g. Perforce, ClearCase, PVCS, Subversion, Visual Source Safe, Vault, and/or CVS)

* BS in Computer Science or Equivalent

* Programming **proficiency in one or more languages scripting/programming languages** (e.g. VB, C++, Java, Delphi or Web development skills).

* Experience with **Installshield** and NMAKE a plus. Familiarity with Microsoft's upcoming SCM tool Team System, which is currently in Beta, is a plus.

* Experience with **parallel development, branching and labeling**

* Highly motivated to deliver quality products to customers.
