

BellSouth Corporation

Data Analysis / Technical Assurance (DATA) position

BellSouth, a Fortune 100 company, is an international communications corporation.

As a DATA person, you can work as part of a team to evaluate BellSouth's information systems and technologies to determine whether or not procedures and controls are in place that will ensure the integrity of computer operations. This will include developing automated tools (in C or C++) to support review teams, performing data forensics to determine the reliability and integrity of data extractions, and reviewing system and network security to ensure compliance with all rules, guidelines and standards. Bulk data integrity and analysis is a major part of the job function, this requires that the candidate be able to develop their own software (in C or C++) to perform these functions.

You may also participate in major system development projects to help ensure that they are designed with adequate controls and audit trails and that the projects follow a structured, controlled and approved system development life cycle.

Requires a **proficiency in C or C++ programming language and the ability to work at least 3 semesters (normally non-consecutive)**. Detailed knowledge of at least one operating system is required (Windows, MVS, VM, UNIX, Unisys, etc). Experience with Internet application programming (PHP, C#) and Database (Oracle) work is a plus. This position also may require some domestic travel, approximately 5% annually. **This job is a programming position and the candidate can expect to spend at least 60% of their time programming in C or C++.**

Location: Birmingham, Alabama
