

Define the following six states:

- 0 no calls in progress, 3 callers idle
- 1 1 call in progress, 2 callers idle
- 2 2 calls in progress, 1 caller idle
- 3 2 calls in progress, 1 caller impatient
- 4 1 call in progress, 1 caller impatient
- 5 0 calls in progress, 1 caller impatient

$$Q = \begin{bmatrix} 3\lambda & 0 & 0 & 0 & 0 & 0 \\ \mu & -\mu & 2\lambda & 0 & 0 & 0 \\ 0 & 2\mu & -2\mu & \lambda & 0 & 0 \\ 0 & 0 & 0 & -\mu & 2\mu & 0 \\ 0 & 0 & 2\lambda & \lambda & -\mu & \mu \\ 0 & 2\lambda & 0 & 0 & 2\lambda & -\mu \end{bmatrix}$$

The state transition diagram is

$\pi Q = 0$
 $\pi 1 = 1$
 $\pi [I - Q] = (1 \ 0 \ 0 \ 0 \ 0 \ 0)$

The rate generator matrix is

#1 machine
(0, 1, 2)

$$\pi = [0.26 \quad 0.4 \quad 0.07 \quad 0.27]$$

$$\begin{array}{cccc} \downarrow & \downarrow & \downarrow & \downarrow \\ (3, 0, 0) & (2, 0, 1) & (0, 2, 1) & (1, 1, 1) \end{array}$$

$$\begin{array}{cccc} \downarrow & \downarrow & \downarrow & \downarrow \\ 3 & 2 & 0 & 1 \end{array} \quad \text{working}$$

$$E[N] = 3 \times 0.26 + 2 \times 0.4 + 1 \times 0.27$$
